

**Intra-night flickering of T CrB.
Appendices A, B and C by Ts. B. Georgiev et al.**

Appendix A. 6 tables, pages 1 – 6.

Appendix B. Light curves #01–#40, pages 7 – 16.

Appendix C. Light curves #01a–#27b, pages 17 – 24.

Table 1. Observing circumstances and and photometric behavior of the flickering source over the years: 1 – Group of monitorings: I – photoelectric observations, II and III – CCD observations; 2 – Years of monitorings; 3 – Year AV and SD; 4 – Number of monitorigs and photometric error, mag; 5 – Duration of monitoring, min; 6 – Duration of monitoring AV and SD; 7 – Number of exposures in the monitoring; 8 – Number of exposures, AV and SD; 9 – monitoring time resolution, min; 10 – U magnitude, AV and SD for the group; 11 – u flux AV and SD for the group; 12 – flickering SD of u flux, AV and SD in the group, flux; 13 – flickering RD of u flux – AV and SD in the group, flux; 14 – flickering SD of u flux, AV and SD in the group, mag; 15 – flickering RD of u flux – AV and SD in the group, mag.

1	Observations	Group I (el.phot.)	Group II (CCD)	Group III (CCD)		
2	Years range	1993.2	1999.0	2009.1	2011.1	2016.1 2018.5
3	Yeaes AV, SD	1997.1	1.4	2009.7	0.4	2017.2 0.9
4	Num. LCs, mag. error	27	0.03	4	0.01	9 0.01
5	T_M range, min	20	189	87	158	66 185
6	T_M AV, SD, min	85	45	113	31	85 456
7	Num. exposures	96	674	24	76	24 191
8	Num. exposures AV, SD	386	144	39	25	85 54
9	Time resolution, min	0.08	0.33	2	4	1 4
10	U_{AV} , U_{SD} , mag	10.25	0.52	11.01	0.59	8.48 0.33

Table 2. Data about the observations and parameters of 40+32 light curves (LCs): 1 – designation of the LC, 2 – year of the monitoring LC, 3 – duration of the LC, min, 4 – number of data in the LC, 5 – average time resolution the LC (min), 6 – polynomial degree for the LC flattening, 7 – flux average of the LC, 8 – flux standard deviation of the flatten LC (%), 9 – flux range deviation of the flatten LC, 8 – standard deviation in the MLC (Eqs. 4) (%), 9 – half-range (half-amplitude) deviation in the MLC, 10 – deceleration of the LC standard error after flattening.

#LC	year	T_M	n_M	τ_M	m	u_{AV}	u_{SD}	u_{RD}	SD_0/SD
1	2	3	4	5	6	7	8	9	10

Table 6. Data about 48+36 Quasi-periods (QPs) in the monitoring light curves (LCs) and their relative "energies" on the density functions: 1,6 – designation of the LC, 2,7 – QP duration (min), 3,8 – lg QP, 4,9 – logarithmic level of the density function $\log u_{QP}$, corresponding to the QP, 5,10 – relative level of the density function $u_{QP}\%$, corresponding to the QP.
